Application No.: 09/888,639

## LISTING OF THE CLAIMS AS AMENDED

2

- 1. (currently amended) A method for inducing T-cell non-responsiveness to an allogeneic or xenogeneic donor tissue or organ in a human recipient of the tissue or organ comprising administering to the recipient <u>from five to eight days</u> prior to transplantation of the tissue or organ:
- (a) a donor cell which expresses at least one donor antigen and which mediates contactdependent helper effector function; and
- (b) an anti-human gp39 antibody.
  - 2-3 (canceled)
- 4. (previously presented) The method of claim 1, wherein the anti-human gp39 antibody is a monoclonal antibody.
  - 5-6 (canceled)
- 7. (original) The method of claim 4, wherein the monoclonal antibody is a chimeric monoclonal antibody.
- 8. (original) The method of claim 4, wherein the monoclonal antibody is a humanized monoclonal antibody.
- 9. (original) The method of claim 1, wherein the allogeneic or xenogeneic cell is a lymphoid cell.
  - 10. (original) The method of claim 9, wherein the lymphoid cell is a B cell.
  - 11. (original) The method of claim 10, wherein the B cell is a resting B cell.
  - 12. (canceled)
- 13. (original) The method of claim 1, wherein the tissue or organ comprises pancreatic islets.
- 14. (original) The method of claim 1, wherein the tissue or organ is selected from the group consisting of liver, kidney, heart, lung, skin, muscle, neuronal tissue, stomach and intestine.

Application No.: 09/888,639

3

- 15. (currently amended) A method for inducing T cell non-responsiveness to an allogeneic or xenogeneic donor tissue or organ in a human recipient of the tissue or organ comprising administering to the recipient <u>from five to eight days</u> prior to the transplantation of the tissue or organ:
- (a) a donor cell which expresses at least one donor antigen; and
- (b) an anti-human gp39 antibody, whereby wherein T cell non-responsiveness is induced in the recipient to the allogeneic or xenogeneic donor tissue or organ, which expressed the donor antigen, in a human recipient of the tissue or organ is induced.
  - 16. (canceled)
- 17. (original) The method of claim 15, wherein the anti-human gp39 antibody is a monoclonal antibody.
  - 18-19 (canceled)
- 20. (original) The method of claim 17, wherein the monoclonal antibody is a chimeric monoclonal antibody.
- 21. (original) The method of claim 17, wherein the monoclonal antibody is a humanized monoclonal antibody.
  - 22 -23 (canceled)
- 24. (original) The method of claim 15, wherein the allogeneic or xenogeneic cell is a lymphoid cell.
  - 25. (original) The method of claim 24, wherein the lymphoid cell is a B cell.
  - 26. (original) The method of claim 25, wherein the B cell is a resting B cell.
  - 27. (canceled)
- 28. (original) The method of claim 15, wherein the tissue or organ comprises pancreatic islets.

Application No.: 09/888,639

4

- 29. (original) The method of claim 15, wherein the tissue or organ is selected from the group consisting of liver, kidney, heart, lung, skin, muscle, neuronal tissue, stomach and intestine.
- 30. (currently amended) A method for treating diabetes comprising administering to a human subject in need of treatment:
- (a) an allogeneic or xenogeneic cell which expresses at least one donor antigen;
- (b) an anti-human gp39 antibody; and
- (c) donor pancreatic islet cells, wherein the allogeneic or xenogeneic cell which expresses at least one donor antigen and the anti-human gp39 antibody are administered from five to eight days prior to administration of the donor pancreatic islet cells,

whereby and wherein T cell non-responsiveness to the donor pancreatic islet cells is induced.

- 31. (original) The method of claim 30, wherein the anti-gp39 antibody is a monoclonal antibody.
  - 32-33 (canceled)
- 34. (original) The method of claim 31, wherein the monoclonal antibody is a chimeric monoclonal antibody.
- 35. (original) The method of claim 31, wherein the monoclonal antibody is a humanized monoclonal antibody.
  - 36-37 (canceled)
- 38. (original) The method of claim 30, wherein the allogeneic or xenogeneic cell is a lymphoid cell.
  - 39. (original) The method of claim 38, wherein the lymphoid cell is a B cell.
  - 40. (original) The method of claim 39, wherein the B cell is a resting B cell.
  - 41 (canceled)
- 42. (currently amended) A method for inducing T cell non-responsiveness to an allogeneic donor tissue or organ in a human recipient of the tissue or organ comprising

Application No.: 09/888,639

5

administering to the recipient <u>from five to eight days</u> prior to transplantation of the tissue or organ:

- (a) a donor cell; and
- (b) an anti-human gp39 antibody, and whereby wherein T cell non-responsiveness is induced in the recipient to the allogeneic donor to a tissue or organ comprising the donor allogeneic cell in a human recipient of the tissue or organ is induced.
- 43. (original) The method of claim 42, wherein the anti-gp39 antibody is a monoclonal antibody.
  - 44 45 (canceled)
- 46. (original) The method of claim 44, wherein the monoclonal antibody is a chimeric monoclonal antibody.
- 47. (original) The method of claim 44, wherein the monoclonal antibody is a humanized monoclonal antibody.
- 48. (original) The method of claim 42, wherein the donor allogeneic cell is a lymphoid cell.
  - 49. (original) The method of claim 48, wherein the lymphoid cell is a B cell.
  - 50. (original) The method of claim 49, wherein the B cell is a resting B cell.
